OptiSpray® ROBO Roving represents a compelling solution for fabricators that want to save time and resin while increasing the performance of their products. Designed specifically for your open-mold robotic chop process to improve dispersion and increase conformability.

- Multi-end gun roving reinforcement using Advantex® glass fiber, which combines the electrical and mechanical properties of traditional E-glass with the acid corrosion resistance of E-CR glass.
- Advantex® glass roving has a sizing system with a silane coupling agent; designed to provide optimal performance for spray-up applications where medium wet-out speed is preferred.

**FOR MEDIUM WET-OUT IN LARGE AND VERTICAL PARTS**

### Product Benefits

**Increased Efficiency**
- Low fuzz combined with easy chopping, flat-lay down, and uniform dispersion saves time.
- An improved anti-stat provides less static buildup for your robotic-based production.

**Reduced Cost**
- Higher glass loading with optimal resin consumption reduces the amount of expensive resin required.

**Improved OptiSpray® ROBO Roving Performance**
- Good mechanical properties, great surface quality, low spring back and reduces risks with trapping air. The new OptiSpray® ROBO fiber geometry has improved conform-ability for improved roll-out.

### Applications

OptiSpray® ROBO Roving can be used in a variety of spray-up applications including: boats, truck caps, vehicle body parts, bath tubs, showers, spas, tanks, and applications with large parts, complex molds, or sharp curvatures.

*Add 35 to 45 kg to obtain gross weight.

---

**Labeling**

Each doff has a self-adhesive identification label, showing the product reference, and the production date. Each pallet has two identification labels detailing the product reference, pallet net and gross weights, production date, and pallet production code.

---

**Storage**

OptiSpray® ROBO Roving should be stored in its original packaging in a dry and cool place. Best conditions are at temperatures from 10 to 35°C (50 to 95°F) and humidity between 35% – 85%. If you store the product at lower temperatures, please move the soon-to-be-processed pallets to the production area 24 hours ahead of time. You can stock pallets, one-on-one, with a plywood plank between the two.
