P207 multi-end roving represents a compelling solution for fabricators that want to save time while realizing optimal performance for continuous process spray-up applications.

- Produced with patented Advantex® corrosion resistant E-CR glass by Owens Corning.
- Compatible with polyester and vinyl ester resin systems.

**FOR SPRAY-UP IN LARGE AND VERTICAL PARTS**

</thead>
<tbody>
<tr>
<td></td>
<td>• Low fuzz combined with ease of chopping, and roll out, outstanding compatibility for flat lay down, and uniform dispersion saves time.</td>
</tr>
<tr>
<td></td>
<td>• Designed to provide optimal performance for spray-up applications where medium wet-out speed is preferred.</td>
</tr>
<tr>
<td></td>
<td>• Superior processing performances achieved with highly filled resin systems.</td>
</tr>
</tbody>
</table>

**Exceptional Performance**

- Great surface quality, excellent conform-ability, doesn’t trap air, and low springback.
- Features Advantex® glass fiber, which combines the electrical (no static) and mechanical properties of traditional E-glass with the acid corrosion resistance of E-CR glass.
- Ease of use and supreme performance on vertical parts and large or complex molds.

**Application**

P207 roving can be used in a variety of spray-up applications, including boats, truck caps, vehicle body parts, bath tubs, showers, spas, tanks, and applications with large parts, complex molds, or sharp curvatures.
Each doff has an identification label, showing the product reference and the production date. Each pallet has five identification labels detailing the product reference, pallet net and gross weights, production date, and pallet production code.

It is recommended to store glass fiber products in a cool, dry area. The glass fiber products must remain in their original packaging material until the point of usage; the product should be stored in the workshop, within its original packaging, 48 hours prior to its utilization, to allow it to reach the workshop temperature condition and prevent condensation, especially during cold season. The packaging is not waterproof. Be sure to protect the product from the weather and other sources of water. When stored properly, there is no known shelf life to the product, but retesting is advised after two years from the initial production date to ensure optimum performance.
