M723A chopped strand mat represents an ideal solution for demanding applications requiring good surface finish and exceptional mechanical properties, in hand lay-up or closed mold processes.

- Produced with patented Advantex® corrosion resistant E-CR glass by Owens Corning.
- Made of fine-medium tex multi-chop strands randomly dispersed and bonded together with a highly soluble polyester powder binder.
- Certified by Lloyd’s Register on their website, the company lists itself as Lloyd’s Register and Det Norske Veritas.

**Product Benefits**

**Easy handling and moldability**
- Very good glass bonding provides excellent dry handling characteristics and minimized fiber shedding during molding process.

**High process efficiency**
- Fast wetting and quick air release help reducing the labor required to roll out the part.
- Exceptional wet tensile strength perfectly fits wet and carrying process.

**High performance**
- Optimized product design allows good surface finish and smooth surface behind gelcoat while providing the final part with exceptional tensile and flexural performances.

**Enhanced service life**
- Compared to standard E-glass, Advantex® glass helps with enhanced service life in applications facing corrosion.

**Application**

M723A mat is designed for hand lay-up or closed mold processes with polyester, vinyl ester, and DCPD resin systems. Applications include boat hulls, automated matched metal die closed molding of automotive load floors, and lamination for RV and truck flat panels.
Availability

M723A is available in North America and Europe. Additional weights and widths are available upon request by your Owens Corning contact.

Packaging and Labeling

Each roll is wound on a 101.6mm (4") internal diameter cardboard tube and fully enclosed in Cling-Pak™ wrap. Sixteen rolls are positioned vertically on each pallet, banded with tape and Cling-Pak™ wrapped for stability and protection.

Each roll bears a label detailing the product description, product code, nominal weight, roll width, roll number, and date of manufacture.

Storage

Unless otherwise specified, it is recommended to store glass fiber products in a cool, dry area. Ideal conditions are at a temperature between 10°C and 35°C and a relative humidity between 35% and 85%. The glass fiber products must remain in their original packaging material until the point of usage. If the storage temperature is below 15°C, it is recommended that the product be stored in the workshop, within its original packaging, at least 24 hours prior to use to help prevent condensation. The packaging is not waterproof. Be sure to protect the product from the weather and other sources of water. When stored properly, there is no known shelf life to the product, and retesting is advised after three years from the initial production date to insure optimum performance.
